

ABHIMANYU DUDEJA

Boston, MA | (857) 351-4147
dudeja.ab@northeastern.edu | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

EDUCATION

Northeastern University , Boston, MA	Expected Dec 2027
Khoury College of Computer Sciences	
Master of Science in Computer Science	
<i>Relevant Coursework:</i> Algorithms, Database Systems, Program Design Paradigms, Web Development	
SRM Institute of Science and Technology , Chennai, India	Jun 2025
<i>Bachelor of Technology in Computer Science</i>	

TECHNICAL KNOWLEDGE

Languages	Python, SQL, R, Java, C, C++
ML/DL	TensorFlow, Keras, Scikit-learn, OpenCV, PyTorch
Data	NumPy, Pandas, Matplotlib, Seaborn, Plotly, Power BI
Databases	MySQL, PostgreSQL, MongoDB
Tools	Jupyter, Git, AWS (Glue, S3), Oracle Cloud
Certifications	Machine Learning (Coursera), ML Foundations (AWS), Google Data Analytics, Oracle Cloud Infrastructure, Python Development

WORK EXPERIENCE

Deloitte , Remote	Jul 2023 - Aug 2023
<i>Data Engineering Intern</i>	
- Improved 40% data ingestion speed by optimizing AWS-based ETL pipeline using SQL and AWS Glue for large-scale analytical datasets. - Developed automated dashboards and monitoring scripts for real-time pipeline health tracking and anomaly detection.	
Tech Mahindra , Noida, India	Jun 2023 - Jul 2023
<i>Data Analyst Intern</i>	
- Cut 50% manual reporting by automating KPI report generation using Python and SQL. - Created interactive dashboards with drill-down capabilities enabling data-driven decision-making for stakeholders.	

PROJECTS

Automated Brain Tumor Detection using Deep Learning	Sept 2024 - Dec 2024
- Attained 94% precision on MRI datasets by constructing a CNN-based tumor detection system with sensitivity and specificity analysis. - Engineered preprocessing pipelines for MRI scans including normalization, resizing, and augmentation to improve model generalization.	
Multi-Stage Brain Tumor Classification using DNNs	Jan 2025 - May 2025
- Achieved 97% test accuracy by developing a CNN model using TensorFlow/Keras for multi-stage brain tumor classification on medical imaging datasets. - Curbed 40% overfitting through batch normalization, dropout layers, and data augmentation (rotation, flipping, scaling).	
Diabetic Retinopathy Detection , Computer Vision	May 2024 - Jun 2024
- Obtained 92% accuracy classifying disease stages by training a CNN on 35K+ high-resolution retinal images from Kaggle. - Boosted 15% validation performance through systematic hyperparameter tuning and dropout optimization.	
FundTank , Startup Investment Simulation Platform	Feb 2026 - Apr 2026
- Built a startup simulation platform using React 18, Node.js, Express, and MongoDB (native driver) with 1,200+ seeded records for portfolio analytics and investor leaderboards. - Designed investment tracking, estimated returns, and ROI computation APIs enabling data-driven comparisons across startup categories.
